Our know-how	18

“ The world of payment systems is an exciting field for us because it encompasses various professions, such as electronics, computer science, and electromechanics, as well as mechanical design and ergonomics.

It now holds a prominent place in the laundry industry and is constantly evolving by regularly integrating innovative cutting-edge technologies related to the internet, telephony, and payment systems to meet user demands.

Complex and organized into numerous domains, the world of payment systems requires highly skilled specialists who are continually adapting to changes.”

Emmanuel BERTRAND
Founder of CKSQUARE

MYOSIS RANGE

*At each laundromat, its payment terminal.
Our Myosis range's diversity allows us to meet your specific expectations :
from simplicity to the latest innovations.
With their advanced features, our payment terminals fully participate in
the increase of your turnover.*

MICRO LAUNDROMAT PAYMENT TERMINAL

MYOSIS Micro L.A.P CONTACTLESS

(Wall-mounted)

PAYMENT TERMINAL - 3 MACHINES
ultra-compact and innovative

Ideal for campsites and residences, the Micro L.A.P payment terminal can control 1 to 3 machines.

With a very compact design, the Micro L.A.P central unit offers a single payment method. The contactless card version enables payment with credit cards and mobile options.

Thanks to its connectivity, this micro payment terminal will simplify your life. From a distance you can check payments, start a machine, change a configuration, take the terminal out of service.

The Micro L.A.P. payment terminal is the solution for micro laundromats at a particularly attractive price.

SMALL LAUNDROMAT PAYMENT TERMINAL

MYOSIS T.A.P BANK TERMINAL

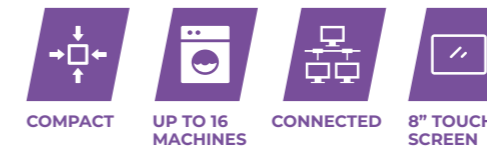

(Wall-mounted)

PAYMENT TERMINAL - 16 MACHINES
simple and cost-effective

In a compact design, this central unit is suitable for residential and/or neighborhood laundries with up to 16 machines. Competitive, it offers full remote management functions.

Its basic version supports credit card payment (contact and/or contactless), while coin and token payment is available as an option. A private electronic wallet system (Badgic Reader) enables cashless payment.

The electronic wallet is rechargeable through a standalone console, a PC application, or via the internet. This central unit is available in a numeric keypad or illuminated stainless steel push-button version.

CENTRALE DE PAIEMENT – 16 MACHINES centrale standard : simple et complète

Ideal for medium-sized laundries, this range comes in two formats: built-in and surface-mounted. It offers traditional payment methods such as bills, coins with change, contact and contactless card payment, as well as mobile payment.

Machine selection can be done either through a numeric keypad or illuminated crown buttons—your choice according to your preference.

More than just a payment terminal, the multiple features and options contribute to your business strategy: manage promotional campaigns, offer 'washing packages,' and allow your customers to accumulate loyalty pointsobile.

Behind the simplicity of this terminal lies a powerful tool for sales and customer loyalty, serving your imagination. Like all our terminals, it is connected, allowing you to effortlessly resolve customer issues. Remotely, you can process refunds, start a machine, verify a payment, and more..

(Encastré)

SMALL LAUNDROMAT PAYMENT TERMINAL

MYOSIS T.E.M v2 TACTILE (Encastré)

CENTRALE DE PAIEMENT – 16 MACHINES centrale haut de gamme : le tactile facile

The T.A.M payment terminal offers a wide range of configurations. It combines robustness and ease of operation. Available in both built-in and surface-mounted versions to adapt to various setups.

With its 8" touchscreen, the T.A.M terminal allows you to boost sales and increase your average transaction value with commercial offerings.

The interface is fully customizable, and the large color-coded selection buttons make it easy to distinguish your machines.

A menu hierarchy is possible to group your machines by type to simplify customer choices. You can offer additional services associated with the machines. The terminal becomes a true sales assistant.

Remote management allows for intuitive control of your laundry. You can process refunds, start a machine, verify payments, and more.

A home automation module enables control of door openings, lighting, and the broadcast of audio messages during specific time periods.

DESCRIPTION DES OPTIONS

Marketing Proposal Option :

Un système simple pour proposer des options à vos clients !

A simple system for offering options to your customers! When selecting a machine and before making a payment, the marketing option allows you to offer services associated with that selection. In practice, the payment terminal displays questions, and the user responds with a yes or no. The Marketing Option can modify the customer's selection or add a new one..

Example of use: « Special rate for dryer »

The customer selects a 5 kg washing machine. The payment terminal offers to simultaneously purchase drying at a preferential rate. If the customer accepts the offer, they pay for both. The machine starts, and they receive proof of payment for the dryer (either a token or a ticket with a barcode). This proof of payment will be used to start the dryer later.

This option allows you to display instructions and information without altering the customer's initial choice.

Example : « Hello, we inform you that the detergent is injected directly into your washing machine.».

Pump Control Option :

Automatic detergent injection involves incorporating its price into the machine's cost. In a competitive environment, this system can be detrimental to your laundry business!

By directly controlling the pumps for detergent or fabric softener injection, it becomes possible to make these services optional. When customers make a payment for the machine, the payment terminal asks them whether they want to use these services. It's even possible to offer a different quantity of detergent .

Example of use : Dirty laundry, very dirty (1 dose or 1.5 doses

Pre-Sale Option :

The pre-sale option allows you to create baskets at preferential rates and reduce the number of transactions (avoiding issues with change, for example).

The pre-sale option enables the purchase of multiple services in a single sale, and the payment terminal prints « proof of purchase » tickets.

Example of use: Suppose you want to reward customers who buy detergent and use the washing/drying services. You create a selection titled 'Laundry Pack/Machine 6kg/Dryer' at a preferential price. The customer pays for the selection and receives 3 tickets with 3 different barcodes. To use the pre-paid services, the customer presents each ticket in front of the barcode reader.

A pre-sale allows the purchase of a **type of machine**, not a specific machine.

The « Marketing Proposal » option offers complementary services, and the 'Pre-Sale' option provides the service in the form of a token or QR code ticket.

SMS End-of-Cycle Alert Option :

Your customers will love it.

During payment, your customer has the option to enter their phone number to be notified at the end of the washing cycle.

They will automatically receive an SMS letting them know that their machine is finished.

Loyalty Card or QR Code :

Fidélisez vos clients avec le principe de cagnotage !

The customer creates an account and logs in to the CONNECT LAUNDRY* application. Before each use, the customer inserts their card or scans their QR code. The subsequent payment is added to their account, allowing the customer to accumulate points.

Sur l'application LAUNDRY Manager, vous définissez votre politique de fidélisation. Vous pouvez tout simplement convertir les points clients en crédit ou proposer la gratuité d'un service (séchoir, lessive ...).

Très simple d'utilisation, ce système est apprécié par les clients. C'est un mode de fidélisation performant et efficace dans des contextes de fortes concurrences.
